**Massage carriage****Abstract**

A massage carriage comprises a drive (1), a first shaft that  
10 can be moved by the drive (1) and a second shaft that can be  
moved by the drive (1), two first arms (3), which are connected  
to the first shaft, can be moved by the first shaft and on each  
of which a massage element (4) is mounted, and two second arms  
(6), which are connected to the second shaft and can be moved  
15 by the second shaft, one of which each acts on one of the first  
arms (3). To relieve the back of the person using the chair  
when the massage function of a massage chair is not in use, or  
when the backrest is moved far backwards or downwards, the  
length of the second arms (6), i.e. the distance between the  
20 point of connection to the second shaft and the point of action  
on the respective first arm (3), is adjustable. (Fig. 1)
